

Stakeholder Engagement Report

AI Saturdays Lagos Cohort 10 | Feedback Loops & Community Integration

1. KEY STAKEHOLDERS IDENTIFICATION

Stakeholder Group	Primary Interest	Engagement Strategy
Healthcare Practitioners	Clinical accuracy, patient safety, adherence to ADA guidelines	Expert review of generated responses and prompt verification
Patients & Caregivers	Clear, non-jargon guidance, fast responses, ease of understanding	Qualitative readability and tone feedback during evaluation
Cohort Mentors & Peers	Technical rigor, QLoRA setup, code modularity, reproducibility	Code reviews, demo presentations, and GitHub issue tracking

2. FEEDBACK LOOPS & ITERATIVE IMPROVEMENTS

Insight 1: Repetitive Output Delimiters

Peer review identified that initial post-processing preserved header role strings in outputs. Model post-processing logic was updated to cleanly strip turn tokens.

Insight 2: Mandatory Clinical Disclaimers

Mentors advised embedding domain context directly into the system prompt to enforce medical disclaimers on every response.

3. SUSTAINABILITY & COMMUNITY PLAN

To ensure continued impact beyond Cohort 9, the repository, fine-tuning adapters, and dataset scripts are open-sourced under the MIT license, encouraging open community contributions and continuous evaluation.
